

WeatherMation LIVE Weather Station Software - Envirodata Hosted Web Portal

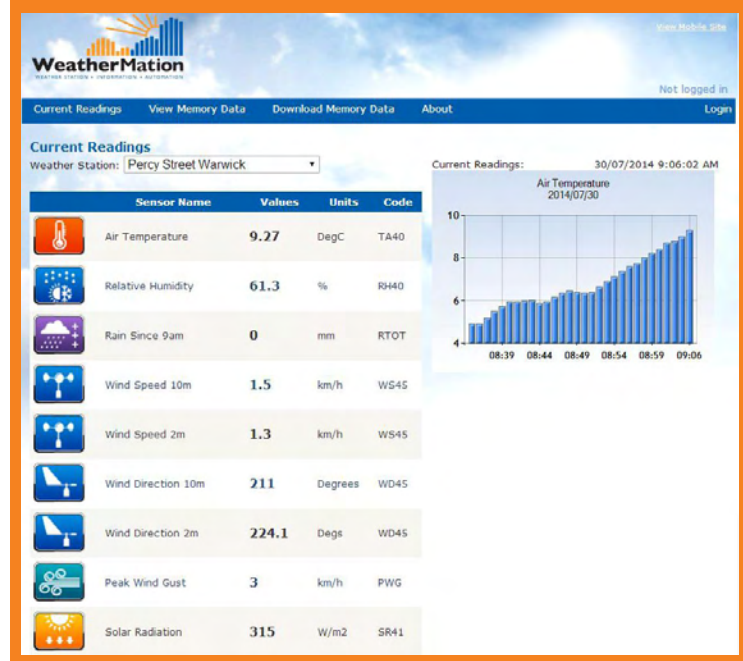

Envirodata's WeatherMation Live service takes all the headache out of managing your data collection, storage and distribution.

- Envirodata manages data collection, storage and distribution for you
- Hosted on Envirodata's secure servers
- One or many Weather Stations
- One or many users with secure login access from any web browser
- Live & historical weather data
- Optional SMS and E-mail alerts
- Mobile device display

Automated Data Collection

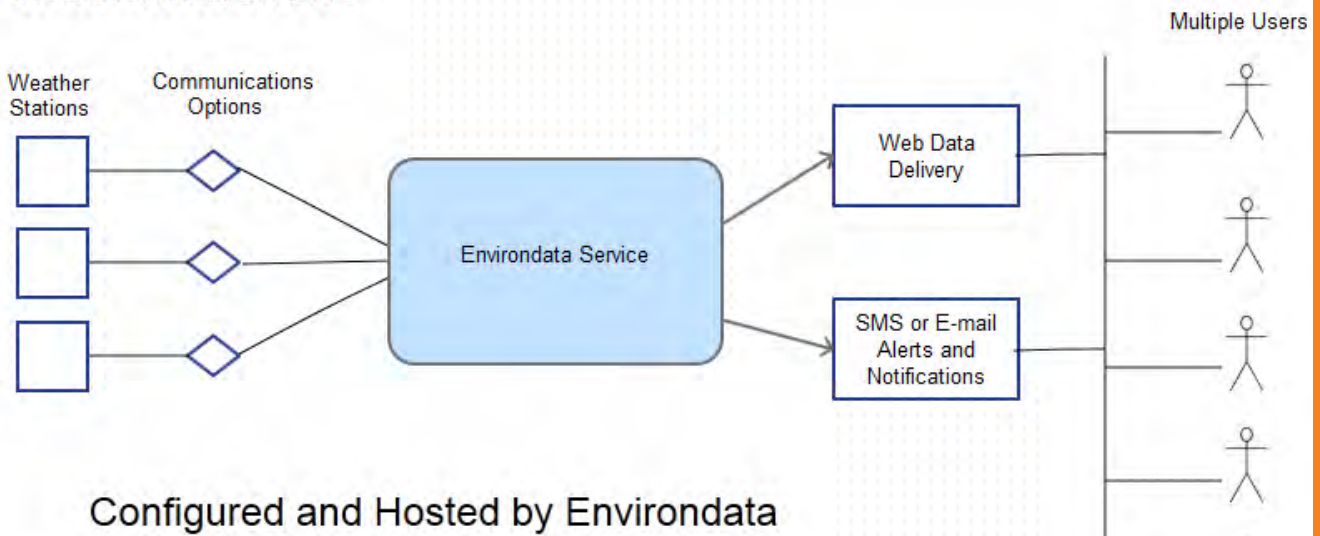

By subscribing to our WeatherMation Live service, our software will

- Collect your weather data from all of your Envirodata weather stations

- Provide all of your Users secure access to live and historic weather data via our secure web portal
- Send SMS and E-mail alerts when your preset weather conditions are met. (Optional)
- Send SMS or E-mail notifications on your specified schedule. (Optional)

WeatherMation Live

Weather data from all of your Envirodata weather stations is automatically collected and saved into WeatherMation's secure SQL database, held on our servers. You own the weather data and only your authorised users can access the site.

User Based Access

Secure logins ensure only those people you allow to see each station will be able to do so.

Public access can be assigned to weather stations you wish to be viewed with no login required.

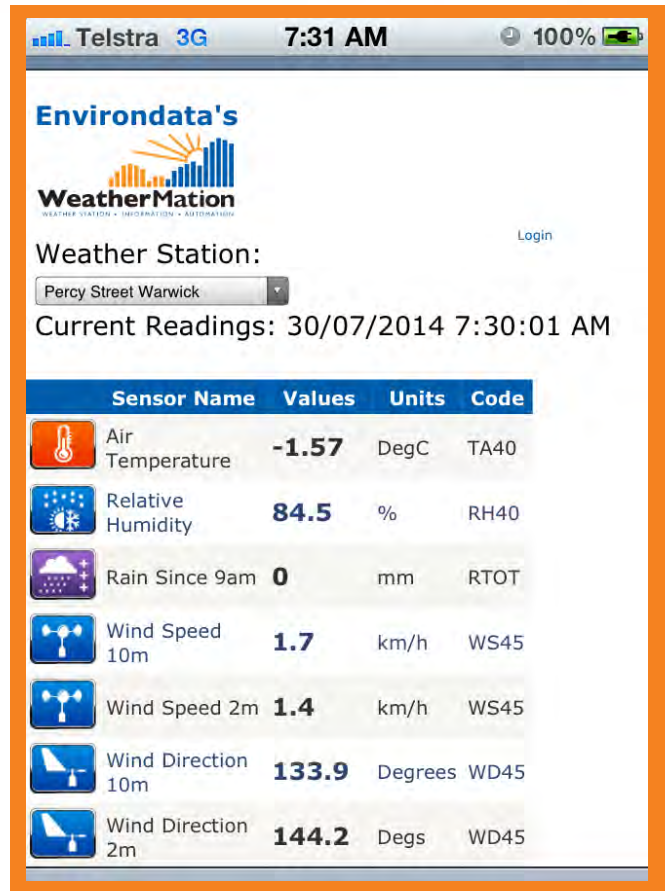

Live Weather Data

WeatherMation Live provides your users access to current weather conditions immediately, any time from any browser.

For live data we will need a data connection to each weather station via Next-G (PSD) or Satellite.

Data Trends

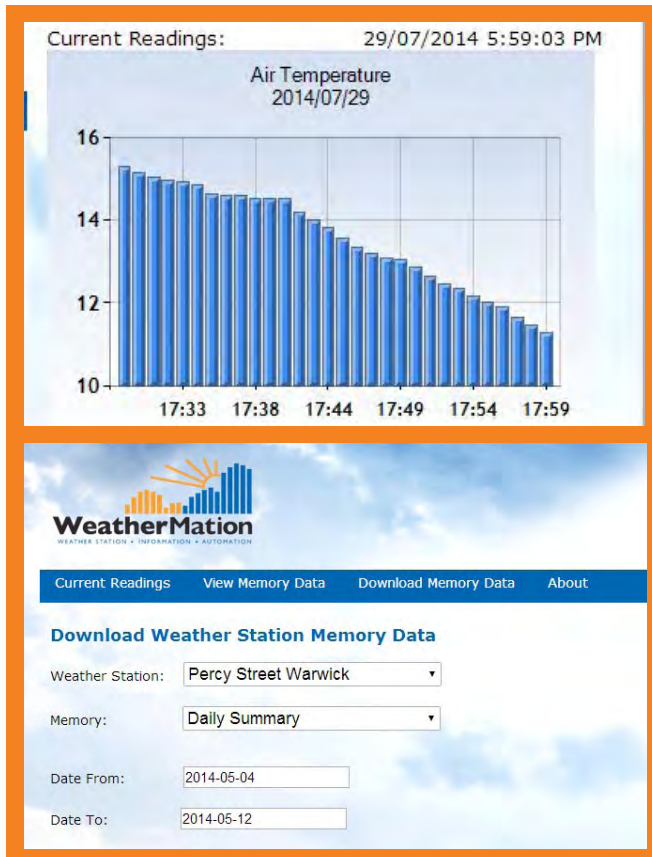

The live weather data option shows trend graphs for convenient display of immediate weather history.

Historic Data

All memory data from your weather stations is held in the WeatherMation SQL database. Your users can view data in trend graphs, and select data ranges to download for more detailed analysis and reporting. (WeatherMation's own Analysis and Reporting package will be available in late 2014.)

Alerts & Notifications

When the weather impacts your operation, having an automated method for alerting your staff by e-mail and / or SMS will save you time and money.

WeatherMation's Alerts Module provides alerts by E-mail or SMS based on your weather data.

You can set 'Do Not Contact' times for your users and alert types, to make sure the people who have to know the weather data get notified when and how they need to.
