

Weather Station Installation & On Site Servicing

Australia Wide Professional Service

Envirodata's Service Department specialises in installing and commissioning your Envirodata Weather Stations on your sites.

For your existing Envirodata weather stations, we offer our on-site preventative maintenance, repair and upgrade service.

This allows you to save time and money, getting your weather monitoring solutions operational with the minimum of fuss and the knowledge everything has been done correctly.

Features - Installation:

- Saves you time and money
- Installation report certifies the system is installed correctly
- Ideal solution for meeting Australian Standards and EPA requirements
- Double your RTB warranty

When you need your weather station installed and commissioned quickly, efficiently, with confidence the system will be accurate & reliable; Envirodata's service team can help you.

We can provide pre-installation siting advice to suit your required monitoring, delivery to site, on-site assistance with final positioning, as well as all preparation and installation works.

Version 160628

The end result is a perfectly installed weather station, with final system checks, calibration checks and an installation report. We also double your warranty.

This saves you time, trouble and money over doing the work yourself, or engaging a local contractor unfamiliar with these systems.

Our 10m Wind Sensor Masts (to meet Australian Standards) are installed at ground level; no need for on-site lifting equipment to be available.

Training

We provide on-site training at the time of installation; from basic maintenance to full software training, we match the training to the needs of your staff on-site.

More advanced training is offered on your premises or in our offices, on an as needed basis.

Features - On Site Services:

- Preventative maintenance keeps your system in good working order and minimises faults
- Regular trips to most parts of Australia
- On site services are cost effective
- Dedicated call outs available if needed
- Allows you to meet Australian Standard requirements for sensor calibration checks
- Calibration & Service report provided

When you need to keep your on-site weather monitoring active with minimum down time, you need an annual service on a regular schedule, from the company that designed and built the system.

While at site we can identify any site specific issues that simply can't be determined if you send the equipment back to us.

With the cost savings of regular combined runs across the country, on site services are also extremely cost effective.

Safety First

Envirodata believes that safety is of the highest importance. All Envirodata technicians are trained & qualified for the work they are doing.

Full 10m Mast System Installed & Commissioned by Envirodata to meet Australian Standards

Safety protocols include site inductions, our SWMS, satellite phones and remote working procedures.

Upgrades

Envirodata regularly performs on-site upgrades to older weather station equipment, bringing your systems back to operational condition. They will have more reliability, more firmware options and the ability to use our WeatherMation LIVE service to automate your data collection remotely.

So don't throw out your old system - chances are we can upgrade and save you money while giving you the solution for weather monitoring you have always dreamed of!

A customer's 15 year old weather station upgraded by Envirodata to modern functionality
